The estimated value of the contracts is about €255 million. The Ukrainian firm has currently mobilized €32 million of funding and is to spend the rest in cooperation with German firms. Also, Belco has in place a €7.7 million loan agreement with the Ukrainian state-owned bank, Naftogaz Ukrainy. The company is also negotiating for a potential loan worth about €25 million from Naftogaz Ukraine and another €25 million from a number of European investors.Q: which one of these is

better: binding events in document.ready or other things? Which one is better to bind events and add-ons in document.ready, or things which should be bind in the document.ready A: Depends on what you mean by better... If by "better" you mean a more elegant solution, then Document Ready, without question. If by "better" you mean a more efficient one, then putting initialization code into a function. This way, the initialization code won't be executed multiple times when the DOM is manipulated. /** * Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements. Effects can be used on a selection or the image as a whole. They can be textured, altered, or

blurred. Sometimes you'll need to cut or copy an area out of an image and paste it elsewhere. The Eraser tool allows you to erase areas of an image or select an area of an image and copy it to a new location. The Gradient tool allows you to select an area and use the tool to automatically make the selected area look like it was painted on with any color you want. Other useful tools include Measure, Build, Foreground, Lasso, and Magic Wand, which are covered here. Brushes A brush or pencil tool is a very important part of Photoshop's toolbox. Brushes have a range of functions, including painting, smudging, retouching, and texturing. Pencil tools have more limited functionality. Brushes come in all sizes, from tiny 100px × 100px square brushes to larger 3200px × 2400px rectangular brushes. Brushes also come with their own preset tool collections: Crease,

Displace, and Dodge: These three brushes are most often used for adding grain or texture to an image. They are similar to a one-pixel-wide stroke, with the color intensifying as it moves across the canvas, creating a slight ridge or grid. Burn, Emboss, Gaussian Blur, and Shadow: These brushes are useful for softening an image or making it darker. The Erode (erase) brush is similar to the Burn, but it erases an area instead of brightening it. The Mix brush blends the image behind the brush with the image in front of it, creating a transition effect. The Blend brush works in the opposite way. Dodge, Burn, Erode, and Blend brushes can be found in the Pencils folder in the Brushes pane. Brush Tip Shape Brush tip shapes are used to control brush size, and to give the brush a unique and uniform appearance. Generally, the size of the brush will increase with the size of the brush tip

shape. There is no minimum shape. The only required shapes are the Rectangular, Square, and Symmetrical. Symmetrical is the default shape, and is similar to the appearance of a star tip. Rectangular and Square brush tips appear to have
